

# THE LIGHT WITHIN

A JOURNEY OF PURPOSE, BALANCE AND BECOMING

AKU-EB High Achievers Awards 2026

آغا خان یونیورسٹی ایگزامینیشن بورڈ  
AGA KHAN UNIVERSITY EXAMINATION BOARD

*“Intellectual pursuits should,  
wherever possible, seek to address the  
universal aspirations of humankind,  
both spiritual and concrete. Those  
aspirations, for our generation more  
than for any before, are intertwined  
in a single global community.”*

**His Highness Prince Rahim Aga Khan V**  
Chancellor, Aga Khan University

Commencement address at the graduation ceremony,  
The Institute of Ismaili Studies, London,  
10 September 2007

## Dedication

At the heart of the traditional Pamiri house is the *Chorkhona* - a distinctive, stepped structure that rises through the centre of the home towards the sky. Its four ascending layers are traditionally associated with earth, water, air and fire, while the opening at its centre welcomes the rays of the sun into the space below.

But the Chorkhona is more than an architectural form. It is part of a house conceived as a microcosm of the universe - a representation of a worldview in which the human, the natural and the spiritual exist in harmony. It brings together what grounds us and what lifts us; what sustains life and what gives it meaning.

The Chorkhona was chosen as the inspiration for this year’s publication because it offers a powerful metaphor for the journey of purpose and becoming.

*To know your purpose is to know what matters to you.*

*To find balance is to know what must remain, and what must change.*

*To become is to have the courage to grow into the person you are capable of being.*

Perhaps, at the end of the day, achievement is not measured by how high we rise, but by how fully we live - how deeply we understand ourselves, how generously we touch the lives of others, and whether the life we build is true to what we believe matters.

And perhaps the light we spend our lives seeking is not somewhere ahead of us.

It has been within us all along.

Artistic rendering of the Chorkhona at the Ismaili Center,  
Houston, prepared with the assistance of AI.

# Acknowledgement

The Aga Khan University Examination Board (AKU-EB) extends its deepest gratitude to the leadership of Aga Khan University for their visionary guidance and steadfast commitment to quality education. We also acknowledge the AKU-EB Board of Directors, our donors, affiliated schools, teachers, and students, whose dedication and partnership have been pivotal to our success. Together, their support strengthens our mission of innovation and excellence in education and assessment, inspiring us to shape a brighter, more sustainable future.

علم و فن از پیش خیزان حیات  
 علم و فن از خانه زادان حیات  
 ای از راز زندگی بیگانه، خیز  
 از شراب مقصدی مستانه خیز  
 مقصد مثل سحر تابنده‌ئی  
 ماسوی را آتش سوزنده‌ئی  
 مقصدی از آسمان بالاتری  
 دلربای دلتانی دلبری  
 باطل دیرینه را غارتگری  
 فتنه در جیبی سراپا محشری  
 ماز تخلیق مقاصد زنده ایم  
 از شعاع آرزو تابنده ایم

*Knowledge and art are the springs of life,  
 Born from its depths, through struggle and strife.  
 O you who have wandered, unaware of its way,  
 Rise with a vision that brightens the day.*

*Let your aim shine bright as the morning sun,  
 Rise beyond the heavens, till the journey is won.  
 Let it sweep away what is worn and untrue,  
 And awaken the strength that lives within you.*

*For we live by the dreams we choose to create,  
 And shine by the light of the hopes we cultivate.*

AKU

## A Purpose Beyond Ourselves

Purpose is not only about discovering what we are capable of achieving. It is also about recognising what we are responsible for.

Our planet is the one home we all share. Caring for it is therefore not simply an environmental responsibility; it is a human one. At Aga Khan University (AKU), this understanding is reflected in a growing commitment to build a healthier, more sustainable future and to lead by example through its own operations. AKU, as part of the Aga Khan Development Network, has committed to achieving net-zero operational greenhouse gas emissions by 2030.

One expression of that commitment is solar energy.

In 2022, AKU began its first solar power project in Pakistan, installing a 550 kW solar photovoltaic system across three locations in Karachi. The 1,021 panels were expected to generate nearly 500,000 kWh of carbon-neutral electricity annually and reduce the University's carbon footprint by more than 365,000 kg each year.

The commitment has since grown substantially. In 2024, AKU launched its largest solar project to date: a 3.3 MW solar photovoltaic installation across the remaining rooftops and three large parking areas at the Stadium Road campus. The project was designed to generate cleaner electricity, reduce reliance on fossil fuels, improve local air quality and save an estimated 1,900 tonnes of CO<sub>2</sub>e every year.

But the significance of these panels extends beyond the electricity they generate. They represent a choice: to use what is available to us more responsibly, to reduce the impact of our actions, and to invest in a future that extends beyond our own immediate needs. Ultimately, sustainability is about recognising that our choices today shape the world we leave behind.

For AKU, harnessing the sun's energy is one tangible answer. Solar power contributes to the University's broader environmental and sustainability goals, aligning with the Sustainable Development Goals around clean energy, responsible consumption, climate action and sustainable communities.

**7** AFFORDABLE AND CLEAN ENERGY

**11** SUSTAINABLE CITIES AND COMMUNITIES

**12** RESPONSIBLE CONSUMPTION AND PRODUCTION

**13** CLIMATE ACTION

## Seeing Our World Differently

*World Environment Day 2026 - Climate Photography Exhibition across AKU campuses*

Climate change can be measured in temperatures, emissions and statistics. But it can also be seen in a landscape transformed by drought, in the force of a flood, in the quiet resilience of nature, and in the changing relationship between people and the environment.

For World Environment Day 2026, the Aga Khan University invited its community to look more closely through a Climate Photography Exhibition held across five AKU campuses. Nearly 200 photographs were submitted by students, faculty and staff from all six countries where AKU operates. Three winning photographs and 30 additional images were selected for exhibition, bringing different perspectives on the year's climate theme to life.

When we pause to truly see the world around us, we become more conscious of our place within it, and of our responsibility towards it. The photographers who captured these moments did more than document climate change. They made it personal, showing how environmental change is not something distant or abstract, but something that touches the places we live, the people around us, and the world we share. And perhaps that is where purposeful living begins: when we allow ourselves to care about what is changing around us, to recognise our responsibility towards it, and to turn that awareness into action.

Winning Project of PCCS 2025: **AKU Dabbawala (Pakistan)**  
Team members: Muqadasa Faqiri, Samrin Alam, Anisa Khan and Nadia Afsheen.

# ◆ From Ideas To Impact

## AKU President's Challenge For Climate Solutions

### *Reimagining Food Systems for a Better Tomorrow*

Climate change can feel like a problem too large for any one person to solve. But meaningful change often begins differently — with someone asking a simple question: What could we do differently?

Through the 2025 President's Challenge for Climate Solutions, students across AKU's campuses in Pakistan, Kenya, Tanzania and Uganda were invited to explore that question through the theme "Bite into Change: Reimagining Food Systems for a Better Tomorrow."

The challenge brought together 442 students in 122 teams, with 331 students progressing to the Ideation Workshop stage. Through mentorship, workshops, exhibitions and expert feedback, students moved from understanding climate challenges to designing practical responses.

Their ideas addressed food waste, agricultural productivity, farmer-to-market connections, food distribution and ways of transforming waste into valuable resources. Fourteen teams ultimately reached the Final Idea Pitch Round, turning months of exploration and refinement into solutions with the potential to make a difference.

What makes the Challenge particularly meaningful is not simply the ideas produced, but the mindset it cultivates. Students were encouraged to see themselves not as observers of a changing world, but as people capable of shaping what comes next.

*"We learned that food is more than a personal choice. In the age of climate change, the food we eat — and the food we waste — ultimately impacts everyone. If you ask me, that's an empowering discovery. It's empowering because it means that every time we go to eat — or to cook for others — we have the opportunity to do something good for the planet and our fellow human beings."*

# ◆ AKU Faculty of Arts and Sciences

The Faculty of Arts and Sciences (FAS) at Aga Khan University offers a transformative undergraduate education designed to challenge assumptions, broaden perspectives and inspire purposeful action.

Bringing together the breadth of an arts and sciences education with AKU's distinctive values, FAS encourages students to think across disciplines, engage deeply with complex questions and develop the intellectual and personal capacities to make a meaningful difference.

For students ready to explore, question and shape what comes next, FAS offers an education designed not simply to prepare them for a career, but to prepare them to think boldly, lead thoughtfully and act with purpose.

### INTERDISCIPLINARY LEARNING

## About AKU Examination Board

Established by Aga Khan University in 2002, AKU-EB is Pakistan's first private university-led examination board, advancing access to quality education through fair and rigorous examination and assessment.

Built on Pakistan's national curriculum, our programmes bring international best practices in pedagogy, learning and assessment into diverse educational settings across the country, with relevance for education systems across the developing world and other contexts seeking locally responsive, internationally informed approaches.

From the Primary School Programme (PSP) and Middle School Programme (MSP) to the Secondary School Certificate (SSC) and Higher Secondary School Certificate (HSSC), AKU-EB offers a continuum of programmes from Grade 4 through Grade 12, grounded in inquiry-based approaches that prepare learners to think independently, engage with complexity and pursue further learning. PSP and MSP further use project-based learning to develop essential 21st-century skills. Through teacher training,

learning resources and close collaboration with affiliated schools, we support educators in bringing these approaches into practice.

Research is at the heart of our work, informing the design, evaluation and continuous improvement of our programmes and assessments. Our assessment practices are grounded in fairness, transparency, validity and reliability, using evidence to strengthen how learning is measured and understood.

We are committed to widening opportunity through scholarships, access arrangements and initiatives that support participation. Our graduates progress to universities in Pakistan and around the world, reflecting pathways that open opportunities for further study and lifelong learning.

As part of Aga Khan University, we draw on a wider academic community spanning education, research and innovation.

## Vision

To be a model of excellence and innovation in education for Pakistan and the developing world.

## Mission

- To increase access to quality education for lower and middle income students across Pakistan.
- To inculcate a culture of higher order thinking in the youth through indigenous educational development and assessment programmes.
- To acquire new knowledge through research and share best practices in education.

## Values

Impact | Quality | Relevance | Access

## Message from the President

This is a proud moment for the Aga Khan University Examination Board. The number of students who take the Board's examinations each year now stands at 26,000, triple the figure of a decade ago. At current rates, Board-affiliated schools will graduate more students in the next five years than in the first quarter-century of AKU-EB's existence. The Board's students continue to excel academically: half of all graduates are admitted to one of the top 15 universities in Pakistan, and over the years students have been admitted to more than 200 universities outside Pakistan. As the Board's scope has expanded, so too has its influence. It continues to work closely with public-sector institutions to improve the quality of learning assessment in Pakistan.

The success of the Aga Khan University Examination Board reminds us that the problems facing Pakistan's education system are not insurmountable. At the time of the Board's founding, school-leaving examinations often privileged rote learning over critical thinking, while high-quality alternatives remained beyond the reach of many families. Today, thanks to AKU-EB, its affiliated schools, and the Board's many supporters, students in more than 400 schools have access to rigorous and affordable examinations, syllabi and learning opportunities that prepare them to thrive in the knowledge-based economy. Teachers also benefit from the Board's efforts, with more than 25,000 educators from private and public schools across Pakistan having participated in AKU-EB training programmes.

The AKU-EB story contains a message for the young women and men honoured in these pages. Namely, that a strong, innovative, problem-focused institution can address important challenges and make a real difference in people's lives. I hope that when the time comes for our most recent graduates to complete their studies and enter the workforce, they will seek out strong, innovative, problem-focused institutions to join – or perhaps found one themselves.

**Dr. Sulaiman Shahabuddin (S.I.)**  
President & Vice-Chancellor  
Aga Khan University

## Message from the Provost

Congratulations to this year's AKU-EB High Achievers. Your results reflect ability, discipline, and perseverance, as well as the encouragement of your teachers, families, and friends. As you complete high school and prepare for university, you are entering a period of extraordinary possibility.

The theme "Finding Your Purpose" invites you to look beyond the next course, degree or career. Purpose is not always a single calling, nor is it something most people discover all at once. It is built over time through curiosity, reflection, experience and service—through the questions you ask, the values you uphold and the choices you make.

Universities, like AKU, are places of exploration. Study deeply, but also widely. My own example is of a non-linear path, starting in biological sciences in Australia, combining science with law in Canada, becoming a public health researcher and then collating a life-time of skillsets into global academic leadership.

Seek out mentors as well as people and ideas that challenge you. Be willing to reconsider your assumptions, learn from setbacks and pursue opportunities you had not imagined. Your education should prepare you not only to succeed, but also to think critically, act ethically, both lead and follow, and contribute meaningfully to the lives of others.

Academic achievement has opened doors for you. Walk through them with confidence, but also with humility and a sense of responsibility. Pakistan and the wider world need graduates who can combine knowledge with empathy, ambition with integrity and innovation with concern for the common good.

As you begin this next chapter, remain open to where learning may lead you. Your purpose may evolve but let it always be grounded in the desire to make a positive difference. I wish you courage, fulfilment and continued success on the journey ahead.

**Dr. Tania Bubela**  
Provost & Vice President, Academic  
Aga Khan University

## ◆ Message from the Vice Provost

Today, as students' celebrate their success in high-stakes examinations under the Aga Khan University Examination Board (AKU-EB), they also mark an important milestone and a turning point in their educational journey. It is at this stage that many students will choose pathways to higher education and career. Questions, priorities and decisions about programs and universities to choose are paramount at this juncture.

However, these questions are not just related to academic pathways and career choices; they are integrally linked to the purpose and goals in life. Finding your purpose in life is a broad question that can be addressed philosophically or pragmatically. In the world today fragmented by conflict, war, deepening poverty and inequities, purpose(s) in life should be seen not just from the perspective of individual prosperity but also from a broader lens of service to the humanity.

I am confident that the strong academic preparation that underpins success in AKU-EB examinations also prepares students for such ethical choices and purpose(s) in life.

I have been associated with the AKU-EB right from inception and seen this examination board leave a very large and positive imprint on the quality of education in Pakistan. I am sincerely grateful to the team at AKU-EB who have maintained a high bar of quality amid all the trials and tribulations. Well Done!

Congratulations to all those who have achieved success and have won awards in these examinations! May you shine brighter and rise higher!

منزل سے آگے بڑھ کر منزل تلاش کر  
مسئلہ ہائے تجھ کو دریا تو سمندر تلاش کر

**Dr. Anjum Halai**  
Professor and Vice-Provost  
Aga Khan University

## ◆ Message from the CEO

To all our students, my warmest greetings!

Every student's journey through education is shaped by moments of discovery, challenge, growth and possibility. Some moments bring recognition and celebration; others happen quietly in a question asked, a difficulty overcome, a new idea understood, or a confidence newly found.

There are questions that no examination can answer: What matters? What is worth pursuing? What kind of person do I want to become? These questions are important.

You are growing up at a remarkable moment of rapid technological, social and environmental change, where new possibilities and challenges will require imagination, judgement and new ways of thinking.

In such a world, knowledge alone will not be enough. You will need curiosity to keep learning, adaptability when circumstances change, courage when choices are difficult, and the judgement to consider not only what technology makes possible, but what is right and worthwhile. You will need creativity, empathy and an openness to perspectives beyond your own.

Above all, you will need a sense of purpose.

Purpose does not mean doing something extraordinary, nor following a single path. It means understanding what matters to you, recognising your responsibilities, and choosing how you want to live and use your abilities. A purposeful life can take many forms: in a family, a profession, a community, a country, or beyond.

At the Aga Khan University Examination Board, we believe education should be about more than examinations. It should nurture curiosity, understanding and critical thinking, and give young people the ability to apply knowledge meaningfully in the world around them. Ultimately, education should help each student develop the confidence, character and capability to shape a meaningful life.

Each of you brings a different set of experiences, strengths, aspirations and possibilities. There is no single path to success, and no single moment that defines who you will become. Your journey continues long after any examination has ended.

So, keep learning, question assumptions, embrace new ideas, and let evidence guide your thinking, while pursuing excellence with kindness, integrity and respect.

May you live with purpose, remain open to possibility, and find fulfilment in the journey ahead.

I wish you continued learning and success in the years to come.

**Dr. Naveed Yousuf**  
CEO, Aga Khan University Examination Board  
Associate Professor of Practice, Educational Development,  
Aga Khan University

A young man with dark hair, wearing a brown and white checkered short-sleeved shirt, a brown tie, and brown trousers, stands in a modern school corridor. The corridor has a high ceiling with exposed wooden beams and large windows on the left. To the right, there are concrete pillars and a view of a multi-story school building with balconies and greenery.

## ◆ National Level Overall Position Secondary School Certificate (SSC)

*“My passion for mathematics, physics, and chemistry inspired me to pursue Pre-Engineering, with the ambition of becoming an aerospace engineer and astronomer. I am fascinated by how engineering and computing make flight possible and enable humanity to explore beyond our planet. The AKU-EB system has strengthened this curiosity by encouraging conceptual understanding, independent learning, and exploration beyond textbooks. I am grateful to my teachers for nurturing my passion and helping me see learning not simply as preparation for exams, but as a true pathway to discovering myself and my ambitions.”*

**Muhammad Saad**  
Korangi Academy, Karachi

“Since joining AKU-EB in 2017, Korangi Academy has experienced a transformative journey towards academic excellence and meaningful learning.

For a school serving an underprivileged community, having a National-Level High Achiever is deeply significant, demonstrating what students can achieve when given opportunity, dedication, and guidance. We deeply appreciate AKU-EB’s progressive assessment approach, which has strengthened conceptual learning, critical thinking, and application of knowledge at Korangi Academy.

Equally, this journey would not have been possible without the dedication of our teachers, whose commitment and continuous learning have played a vital role in nurturing students’ potential. This achievement is a source of immense pride and inspiration for our entire community.”

**Asma Nasir**  
Principal, Korangi Academy, Karachi

◆ National Level Overall Position  
Higher Secondary School Certificate (HSSC)

*“I am the fifth child in my family to journey through the AKU-EB system, and I carry with me not only the strength of that foundation, but the hopes of those who have walked this path before me. As I prepare for the MDCAT and dream of studying Medicine at Aga Khan University, there is one man who simply believes in the person I am becoming, independent of any outcome—my father. His faith in me gives me the courage to dream boldly. AKU-EB has taught me to keep learning, to understand the needs of my time, and to use my education with purpose.”*

**Hafsa Bugti**  
IBA Community College, Khairpur

“IBA Community College Khairpur proudly celebrates the remarkable national achievement of Hafsa Bugti, who secured first position nationwide. This prestigious distinction reflects her exceptional talent, unwavering dedication, perseverance, and pursuit of academic excellence, supported by her teachers, parents, and college administration. We express our sincere gratitude to AKU-EB for providing a credible and inclusive platform that empowers talented students, particularly from remote and underserved areas, to showcase their potential at the national level. Hafsa’s outstanding accomplishment has brought immense pride to our institution and continues to inspire students to aspire for excellence.”

**Dr. Zubair Mughal**  
Principal, IBA Community College, Khairpur

◆ National Level Overall Position  
Secondary School Certificate (SSC)

*“I aspire to become a cardiologist, specialising in interventional cardiology, where knowledge, precision, and compassion come together to save lives. I am drawn to the complexity of the human heart and the opportunity to turn scientific understanding into meaningful change for others. Beyond a career, I see medicine as a way to serve society and make a lasting difference. AKU-EB has strengthened this ambition through its intentional, evolving curriculum, encouraging me to think beyond memorisation, ask deeper questions, and approach learning with curiosity, purpose, and a desire to contribute.”*

**Yumna Wajeeh**

P.E.C.H.S. Girls' School, Karachi

“Achieving the first position at the National Level is a moment of immense pride and joy for our entire school community. We are particularly proud of the student's dedication, perseverance and hard work, supported by the commitment and guidance of the teachers who have been part of her journey over the years. We believe that every child's journey begins from the moment they become part of our school, and we strive to nurture them holistically, fostering curiosity, confidence, independent and critical thinking that stays with them throughout their school years and beyond. Seeing these values reflected in such an outstanding achievement is truly rewarding. This accomplishment has lifted our spirits and strengthened our determination to aim even higher.”

**Bushra Nasir**

Principal, P.E.C.H.S. Girls' School

## Shah Jahan Mosque, Thatta

*Let your inner light lead the way*

Through its rhythmic arches and shifting perspectives, the corridor draws the eye forward, reminding us that direction is often revealed one step at a time. Like the journey of purposeful living, the path may unfold gradually—but a clear sense of what lies within can illuminate the way ahead.

*“I aspire to specialise in obstetrics and gynaecology, with the hope of improving healthcare for women and families in underserved areas of Pakistan. AKU-EB has given me a strong foundation for higher education, but its value goes far beyond academic preparation. It has taught me to remain curious and embrace lifelong learning, to be empathetic, to care about others, and to appreciate the many perspectives that shape our world. It has also encouraged me to discover who I am, what matters to me, and what I want my knowledge to mean beyond myself. I believe that is where the true purpose of education lies: not simply in preparing us for what comes next, but in helping us understand how we can use what we learn to contribute to the lives of others. I hope my answer will always be to serve.”*

Aasma Arshad (HSSC)

## Thar, Sindh

### Where the Desert Endures

Life in Thar has always been shaped by heat, water and the rhythms of rainfall. But a changing climate is making that balance increasingly fragile. Rising temperatures, erratic rainfall and prolonged dry periods are intensifying water stress and placing greater pressure on agriculture, livestock and the communities that depend on them.

Watch  
In a Hotter World

Voices from the Roof  
of the World | Season 2

The struggle to survive in Thar is a testament to the resilience of the people and wildlife, forced to endure in a hotter world.

Shalimar Gardens, Lahore

*Look beyond what lies before you*

Each arch frames another view, creating a succession of perspectives that invites us to look beyond the immediate. Purpose, too, is shaped by the ability to see beyond the present moment—to recognise possibility, choose a direction, and move towards it with intention.

آنچه می جویی تو هستی  
طالب و مطلوب یکی است

*“What you seek, you are.  
The seeker and the sought are one.”*

Rumi  
Divan-e Shams

| 3rd      | Amna Siddiqa          | Nusrat Jahan College, Chenab Nagar               | Humanities      |

*“AKU-EB changed the way I understood education. I entered with the familiar idea that success meant remembering enough information to perform well in exams, but gradually I learned that real learning comes from questioning, analysing, and understanding how ideas connect. That shift gave me greater confidence in my own thinking and changed the way I approach difficult problems.*

*I now want to take that mindset into medicine, where I hope to specialise in cardiothoracic surgery.”*

Abdul Basit (HSSC)  
High Achiever 2026  
Nusrat Jehan Academy Inter College, Chenab Nagar

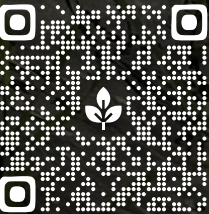

## Mianwali, Punjab

*The Fields We Inherit*

The fields of Mianwali are shaped by agriculture, heat and water. Yet a changing climate is making this relationship increasingly uncertain. Rising temperatures, unpredictable rainfall and increasingly severe floods can disrupt crops, damage farmland and threaten the livelihoods of communities that depend on the land.

## Birmoghlasht, Chitral

*The journey begins with a step*

Amid the rolling hills of Birmoghlasht, a path leads quietly towards the mountains, with the Hindu Kush rising beyond. Not every destination is visible from where we begin, but purpose gives meaning to the journey—guiding each step towards what lies ahead.

Photo: Affaa Clicks

إِذَا مَا طَمَحْتُ إِلَى غَايَةٍ  
مَرَكَبْتُ الْمُنَى وَنَسِيتُ الْحَذَرَ

وَلَمْ أَتَجَنَّبْ وَعُورَ الشَّعَابِ  
وَلَا كَبَّةَ اللَّهَبِ الْمُسْتَعْرِ

وَمَنْ لَا يُحِبُّ صُعُودَ الْجِبَالِ  
يَعِشُ أَبَدَ الدَّهْرِ بَيْنَ الْحَفَرِ

*When I set my heart on a distant goal,  
I follow my dreams with a steadfast soul.*

*I turn not away from the rugged way,  
Nor fear the fierce flames that before me may stay.*

*For whoever will not dare the mountain to climb  
Will remain in the valleys through all of their time.*

Abu al-Qasim al-Shabbi

*“Growing up in a remote village, I have seen people live with pain and illness for years, sometimes accepting their suffering as an unavoidable part of life. Limited access to healthcare and a lack of awareness often mean that people do not know when they should seek help or that better care is possible. These experiences have shaped my decision to pursue medicine. I want to become a doctor who not only treats illness, but also helps communities recognise that living with preventable or treatable suffering should not be considered normal.*

*My years with AKU-EB have shaped me academically in a very different but equally important way. Its emphasis on concepts rather than memorisation taught me to ask questions, understand the reasons behind what I learn, and apply knowledge to unfamiliar situations. This has made me a more independent learner and has strengthened my confidence in tackling challenges.*

*My hope is that, one day, I can stand in a community like the one I grew up in and offer something that was often missing when I was young: access, awareness, and hope. If my journey can help even one person believe that their pain does not have to be their normal, I will feel that I have given meaning to where my own journey began.”*

Muniba Aziz (HSSC)  
High Achiever 2026  
Aga Khan Higher Secondary School, Kuragh

## Garam Chashma, Khyber Pakhtunkhwa Where the Mountains Give

In the high valleys of Chitral, mountain snow and glaciers sustain rivers, fields and communities below. But a warming climate is altering this delicate system. Rising temperatures, changing snowfall and accelerating glacier loss are shifting the timing and availability of water, while increasing the risk of floods and glacial lake outburst events.

## Royal Balcony, Baltit Fort, Hunza

*A wider view begins within*

From the heights of Baltit Fort, the landscape opens into a vast horizon—revealing how perspective can transform the way we see the world. Purpose begins in much the same way: by looking inward, understanding what guides us, and allowing that inner clarity to shape the view ahead.

Photo: Amy Kim

بے ثباتی زیست کی تسلیم کرتا ہوں مگر  
کیا ضروری ہے کہ بے مقصد بھی ہو جائے حیات

کوئی نسب العین ہو گر آدمی کے سامنے  
ہستی ناچیز بھی ثابت ہو روح کائنات

اک حقیقت مجھ پہ روشن ہے جو کرتا ہوں بیاں  
جبکہ میں اے دوستو مرد جہاں دیدہ نہیں

بے ارادہ کیوں پھرے انسان دشت دہریں  
زندگی جو کچھ بھی ہو برگ خزاں دیدہ نہیں

*I know that life is fleeting, yet I ask—  
Must life, for being brief, be without a task?*

*If one holds a purpose, a vision in sight,  
Even a humble existence can take flight.*

*One truth has grown clear to me, and I speak what I know,  
Though I am no man of the world, with its ways I do not  
claim to know.*

*Why should a human wander, without aim or sign,  
Through the wilderness of time, with no path to define?*

*For whatever life may be, through shadow or light,  
It is not an autumn leaf, surrendered to the wind's flight.*

Akhtar Bastavi

(The Purpose of Life) مقصد حیات

“My journey with AKU-EB began in Grade 8, and over the years, it has changed more than just the way I study. It has taught me to stay calm when I do not immediately have an answer, to look at problems from different angles, and to keep going when something feels difficult. With time, I began to see these not just as academic skills, but as qualities I would need in the person I hope to become.

I aspire to become a trauma surgeon. What draws me to this field is the thought of being able to help someone at a moment when they may be facing one of the most critical situations of their life. Trauma surgery demands quick thinking, steady hands, sound judgement, and, perhaps most importantly, the ability to remain composed when others are afraid. I know that becoming that kind of doctor will require years of learning, discipline, and resilience, but that is precisely the challenge I want to take on.”

Aliza Ehsan (HSSC)  
High Achiever 2026  
Aga Khan Higher Secondary School, Gilgit

## Baltoro Glacier, Gilgit-Baltistan

Where the Ice Meets Tomorrow

The glaciers of the Karakoram are more than immense landscapes of ice—they are part of the water system that sustains communities far beyond the mountains. A warming climate is changing snow and ice dynamics across the region, altering melt patterns and increasing risks to downstream communities. What happens to these frozen landscapes ultimately reaches far beyond them.

# The Jenabai Awards

In pursuit of fostering academic excellence and quality education across Pakistan, AKU Examination Board launched the Jenabai Awards scholarship programme for AKU-EB students across Pakistan. The scholarship is directed towards recognising and honouring the outstanding academic achievement of AKU-EB students, and to support their future aspirations.

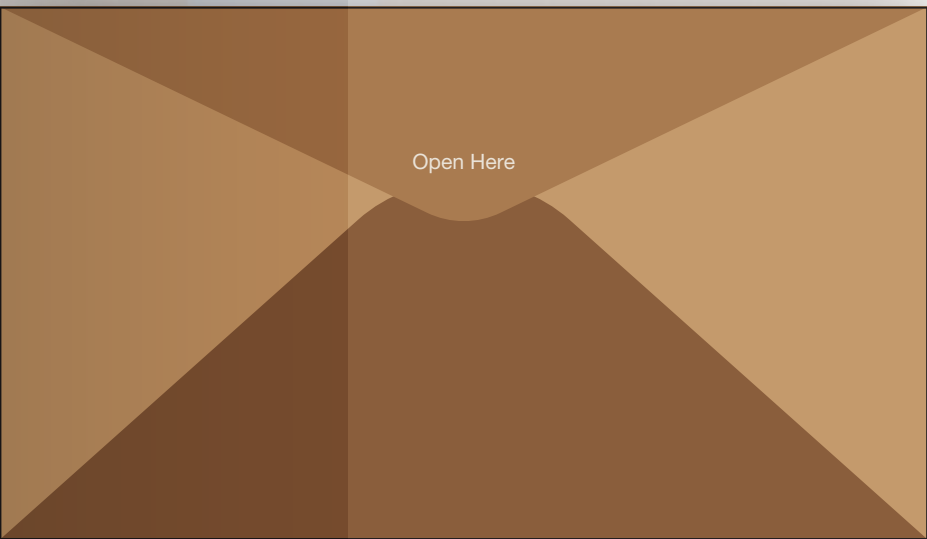

The Jenabai Awards comprise of merit-based scholarships covering the annual examination fees for three consecutive grades: SSC-II (Grade 10), HSSC-I (Grade 11) and HSSC-II (Grade 12). Starting from 2024, the scholarship is awarded on the basis of students' outstanding performance in SSC-I (Grade 9) examinations. This scholarship is a hallmark of the Board's collective dedication to ensuring that its students have access to quality education that equips them with skills, knowledge and competencies necessary to thrive in an ever changing world.

In 2026, the scholarship has been awarded to:

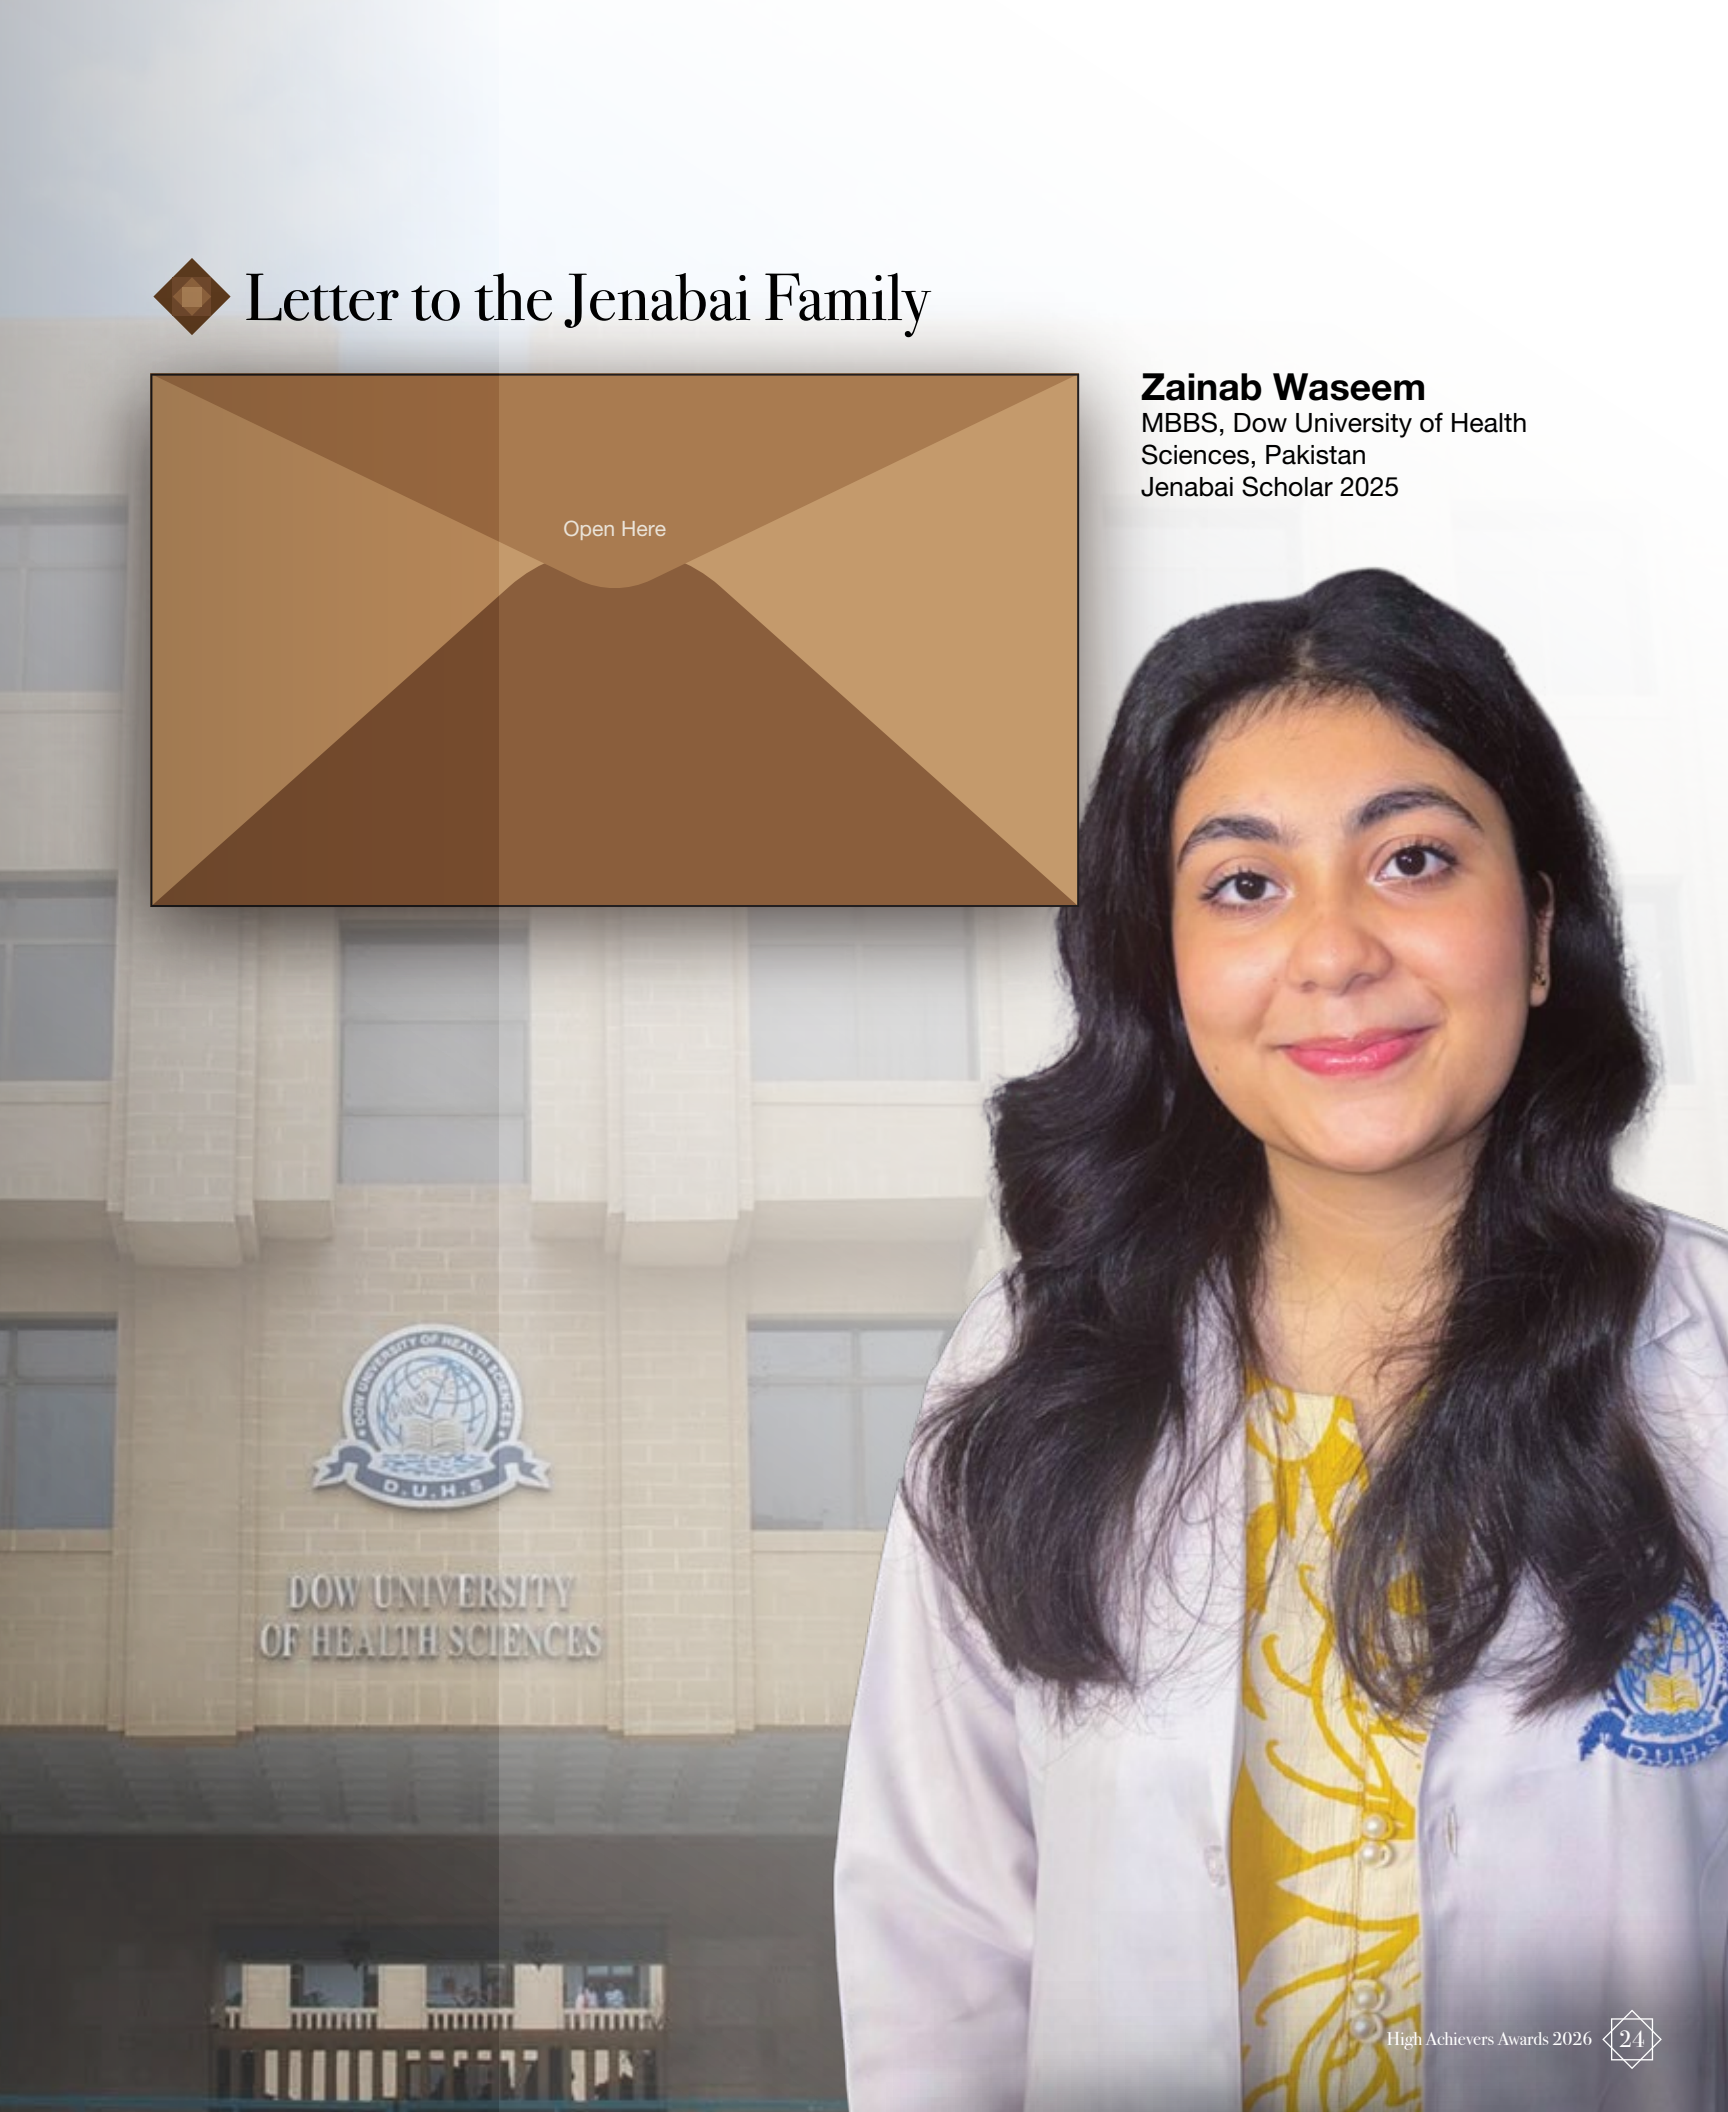

The Aga Khan University Examination Board gratefully acknowledges the Jenabai Hussainali Shariff Family's generosity in funding the Jenabai Awards.

# The Jenabai Awards

In pursuit of fostering academic excellence and quality education across Pakistan, AKU Examination Board launched the Jenabai Awards scholarship programme for AKU-EB students across Pakistan. The scholarship is directed towards recognising and honouring the outstanding academic achievement of AKU-EB students, and to support their future aspirations.

The Jenabai Awards comprise of merit-based scholarships covering the annual examination fees for three consecutive grades: SSC-II (Grade 10), HSSC-I (Grade 11) and HSSC-II (Grade 12). Starting from 2024, the scholarship is awarded on the basis of students’ outstanding performance in SSC-I (Grade 9) examinations. This scholarship is a hallmark of the Board’s collective dedication to ensuring that its students have access to quality education that equips them with skills, knowledge and competencies necessary to thrive in an ever changing world.

In 2026, the scholarship has been awarded to:

The Aga Khan University Examination Board gratefully acknowledges the Jenabai Hussainali Shariff Family’s generosity in funding the Jenabai Awards.

Dear Jenabai Family,

There was a time when becoming a Jenabai Scholar felt like a distant dream to me.

I remember seeing the scholarship announcement after my HSSC-I results and thinking, perhaps I could do this. From that day on, whenever I felt tired or unmotivated, I would open that PDF and remind myself of what I was working towards. I did not know then that believing in that possibility would change the way I saw my future.

On Friday, 28 July, at 10:22am, 2025 my mother received the call. By then, I had almost convinced myself that the dream was not going to come true. Then, suddenly, it did.

I remember hugging my mother, calling my friends and family, and ordering sweets. I was on top of the world, without a worry in it. But I remember the pride in my parents' eyes. I don't think anything could ever match it.

The scholarship gave me much more than an achievement to put on my record. It changed the way I think about what is possible.

Before, my first question when facing an ambitious goal was, Can I really do this? Now, I ask, What would I have to do to get there? It taught me that some dreams do not become less frightening; we simply become braver about pursuing them.

My journey was not always easy. There were family occasions I missed, holidays I had to cut short, and many long, lonely hours spent studying. During those moments, I would imagine the future version of myself - the one who had made it through - and wonder what she would say. Somehow, that was enough to keep going.

When I look back, I realise that my education was never only about examinations or grades. My parents, both teachers, taught me that I could achieve what I set my mind to, but that nothing would simply be handed to me. My teachers saw potential in me when I was still a shy girl, and my friends stood beside me when things became difficult. I have come to believe that we are a living mosaic of everyone who has touched our lives, carrying their lessons, kindness and wisdom within us.

The Jenabai Scholarship is now one of those pieces in mine.

It has taught me to dream bigger, work consistently and step beyond what feels comfortable. Most importantly, it has taught me not to let an achievement become my identity. I want to be proud of what I accomplish without letting it define me, and remain willing to learn, accept setbacks and keep becoming a better version of myself.

Today, I hope to become a surgeon. But I do not want to be simply a technically excellent doctor. I want to become the kind of doctor who never loses the human side of medicine. I hope empathy remains at the centre of how I treat people.

You did not simply invest in a student. You invested in a young person learning to believe in herself, persevere, remain grounded when things went well, and think about the person she wants to become - not just the things she wants to achieve.

I hope I can give someone else the same feeling of possibility your scholarship gave me: the courage to think, perhaps I can do this too.

Thank you for believing in students like me. Your generosity has become part of my story, and I hope that, in the years ahead, the person I become will be worthy of the faith you placed in me.

With deepest gratitude,

Zainab Waseem

# AKU-EB Bridge Scholarship

The AKU-EB Bridge Scholarship is awarded on the basis of merit and financial need. It funds two years of education for students aiming to complete their HSSC from an AKU-EB affiliated school or college.

For Karachi, the scholarship contributes to the monthly school/ college tuition fees, annual book allowance and full coverage of AKU-EB examination fees and for GB & C, the merit-based scholarship covers the examination fees for the two academic years.

From 2014 to 2026, the scholarship has been awarded to:

## AKU-EB Bridge Scholarship 2026 (Karachi)

AKU-EB Bridge Scholarship 2026 recipients from Karachi will be announced in October 2026.

The Aga Khan University Examination Board gratefully acknowledges the Fancy Foundation’s generosity in funding the AKU-EB Bridge Scholarship.

# The Stories We Leave Untold

I became interested in history when I realised that knowing what happened was only the beginning; the harder question was understanding why.

A historical event may have a date, a place and a name, but behind it are people making choices, carrying memories and seeing the same world differently. The more I studied history, the more I began to think of it as a puzzle. One piece can tell us what happened; finding the pieces around it can help us understand why.

This is also why I wonder how many conflicts in our world might look different if we knew more of the histories behind them. We often encounter people we call the “other” without knowing the experiences that shaped them. But when we go back, trace the events and listen to different perspectives, the picture becomes more complicated, and more human. Understanding another person’s history does not mean agreeing with them. It means recognising that their story exists.

That is the kind of understanding I want to pursue.

I am studying Comparative Humanities at Habib University, concentrating in Literature and History. I want to build a future around writing, research and creative work because I am fascinated by how stories shape our understanding of people and societies. History helps me find the pieces; literature allows me to hear the voices within them.

My journey towards this began at school. At AKU-EB, I learned to question what I knew and remain curious about what I did not. Doing well in my Matriculation and Intermediate examinations gave me the confidence to push beyond what I had thought possible.

There were difficult moments too. Low marks in tests and mock examinations sometimes made me question myself. Eventually, I learned to treat those moments not as verdicts, but as information: something to understand, learn from and work through.

The AKU-EB Bridge Scholarship was another turning point. It made opportunities I had once considered out of reach feel possible, and gave me the confidence to pursue a scholarship at university. I later received the Habib University Meritorious Award for my academic performance.

Today, I also write for youth-led magazines, fulfilling a dream I carried from childhood.

I do not yet know where this path will lead. But I know I want to keep searching, for the missing pieces, the untold stories and the perspectives that help us see one another more fully.

AKU-EB Bridge Scholar 2023

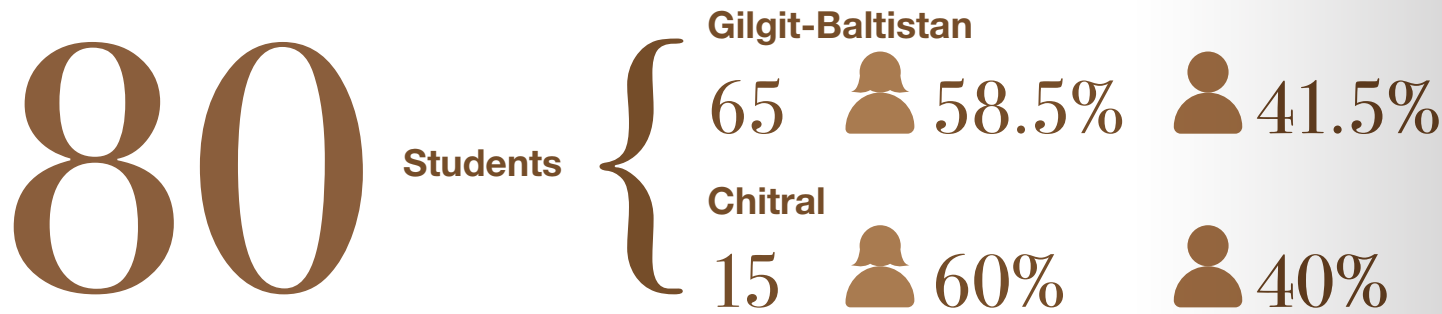

# AKU-EB Harji Scholarship

The AKU-EB Harji Scholarship is awarded to students who have completed their SSC through AKU-EB. This is a merit-based scholarship for students from Gilgit-Baltistan and Chitral to pursue their HSSC from any AKU-EB affiliated institution.

The scholarship covers the full AKU-EB examination fees for both HSSC-I and HSSC-II. Each year, 40 students from Chitral, Ghizer, Gilgit and Hunza are awarded the scholarship.

From 2025, the scholarship has been awarded to:

# When Support Shapes Direction

My journey has always been driven by a desire to learn.

With the Aga Khan University Examination Board (AKU-EB), I discovered that learning is about much more than remembering facts. I began to ask more questions, think critically and look at problems from different perspectives. Over time, this way of learning changed how I approach challenges. Instead of seeing them simply as problems to solve, I began to see them as opportunities to learn and grow.

Along the way, I received the Harji Scholarship. For my family, this support eased an important financial burden and helped me continue my education with greater confidence. For me, it was also deeply meaningful to know that someone believed in my potential and was willing to support my future. The support allowed me to focus more fully on my studies and make the most of my education.

With that focus came the opportunity to explore my interests more deeply. I found myself increasingly drawn to technology, particularly artificial intelligence and its potential to transform the way we live and work. I hope to pursue university studies in Data Science and AI at a university in Italy, where I can deepen my knowledge and build the skills to work with technologies shaping our world.

For me, education is about continuing to explore, learn and grow. The knowledge and skills I gain today will shape the possibilities I can create tomorrow. I am grateful to the Harji Scholarship for helping me continue this journey and for giving me the confidence to pursue the future I imagine for myself.

◆ Chevron Scholarship

The Chevron Scholarship is a need-based scholarship that supports 160 deserving students of Diamond Jubilee Model School, Rahimabad, Gilgit, by covering their SSC and HSSC examination fees through AKU-EB.

From 2025, the scholarship has been awarded to:

◆ When Passion Finds a Spark

Growing up in Gilgit in a digital age, I became fascinated by how technology could solve problems around us. I began to see that computer science was no longer limited to computers. From education and agriculture to healthcare, business and almost every field in between, technology and data are changing how we understand problems and find solutions. I wanted to be part of that change.

My journey at AKU-EB helped me develop the way of thinking I would need. Its concept-based approach taught me to look beyond memorising answers, understand connections between ideas and solve problems logically. I became more curious, independent and disciplined as a learner. These skills prepared me not only for examinations, but for university and life beyond them.

Receiving the Chevron Scholarship was another defining moment. It brought immense pride and relief to my family and me. By easing the burden of my annual examination fees, it allowed me to concentrate fully on my studies. More than financial support, it felt like someone was saying, “We believe in your potential.” That belief gave me an even greater sense of responsibility to work hard and give back.

Today, I am pursuing a Bachelor of Science in Statistics with Data Science at Government College University Lahore. I chose this path because data is everywhere, and I want to use it to understand real-world problems and help build solutions that contribute to Pakistan’s progress.

For me, the Chevron Scholarship was more than support. It was a spark for what comes next.

**Zaki Mehdi**  
BSc Statistics and Data Science, Government College University, Lahore  
AKU-EB Graduate 2026

The Aga Khan University Examination Board gratefully acknowledges the donor for generously funding the Chevron Scholarship.

# AKU-EB Meritorious Scholarship

The AKU-EB Meritorious Scholarship is awarded to students who have completed their SSC from any examination board in Pakistan and wish to continue their HSSC from any AKU-EB affiliated college in Karachi.

The scholarship covers the full AKU-EB examination fees for both HSSC-I and HSSC-II. Each year, 10 students are awarded the scholarship.

## AKU-EB Meritorious Scholarship 2025

1. Aina Beg

2. Ali Zain

3. Ayesha Syed Ahmed Ali

4. Fatima Faheem

5. Kehkashan Anjum

6. Khaula Asim
7. Rimsha Khan

8. Rumaisa Dhedhi

9. Soha Laljee

10. Umm E Samra

11. Warda Ahmed

AKU-EB Meritorious Scholarship 2026 recipients will be announced in October 2026.

# A Dream Taking Shape

I aspire to pursue medicine at Aga Khan University, one of Pakistan’s leading medical institutions, and eventually specialise in surgery.

My interest in medicine grew from wondering how something as complex as the human body can be understood, treated and, sometimes, repaired. Project-based learning at school has further strengthened this interest by giving me opportunities to explore ideas beyond textbooks and understand how knowledge can be applied in real situations. Over time, I realised that medicine is the path I would like to pursue.

My journey at AKU-EB has prepared me for this ambition in ways that go beyond the classroom. It has taught me to look beyond memorisation to understand concepts, think critically, manage my time and take responsibility for my own learning. These are skills I know I will carry with me into medical school and beyond.

Receiving the Meritorious Scholarship was particularly meaningful for my family and me. For my family, it was a source of pride and reassurance; for me, it was recognition that my hard work and consistency were taking me closer to my goals. The financial support eased the burden of examination expenses and allowed me to focus completely on my studies.

But the scholarship gave me something beyond financial assistance: confidence. It reminded me that dedication creates opportunities. With the support of my family, teachers and AKU-EB, I have learned to believe in my potential and to keep working towards the doctor I hope to become.

## Kehkashan Anjum

Habib Girls School, Karachi  
AKU-EB Meritorious Scholar 2025

AKU-EB gratefully acknowledges Dr. Safiuddin Siddiqui and the Meritorious Education Network for their generosity in funding the AKU-EB Meritorious Scholarship.

The Aga Khan University Examination Board gratefully acknowledges the generosity of its donors and partners whose support helps expand access to quality education and create opportunities for deserving students across Pakistan.

## ◆ University Destination Survey

The AKU-EB Annual University Destination Survey (UDS) is to track the university admissions of all AKU-EB graduates across Pakistan. It endorses the fact that students graduating the AKU-EB system are well prepared for higher education and the system enables them to have a level playing field.

UDS conducted since 2016 with more than 95% response rate shows:

90% { 46%  
54%

HSSC graduates secure admissions into various national and international universities.

 96% Graduates reach various universities in Pakistan.

 04% Graduates reach more than 200 international universities.

 48% Graduates reach Top-15 universities in Pakistan.

 48% Graduates reach various public universities in Pakistan.

*“When you are deciding on next steps, next jobs, next careers, further education, you should rather find purpose than a job or a career. Purpose is an essential element of you. It is the reason you are on the planet at this particular time in history.”*

**Chadwick Boseman**  
Howard University Commencement Address, 2018

## What I Stand For

There is a moment, just before I begin speaking in court, when I become conscious of what has brought me there.

A client has walked into my office carrying a problem that, to them, is much more than a legal matter. It may be a dispute over property, a family matter, a livelihood, or a right they believe has been taken away. They have told me their story, handed me their documents and, ultimately, placed their case in my hands.

Then I stand before the court. For those few minutes, their story becomes my responsibility.

I have spent almost a decade practising law, and I have come to understand what makes the profession so demanding. A lawyer does not simply argue a case; he speaks when someone is depending on him to be heard.

When I think about what it means to represent another person, I also think about the people who taught me the value of an opportunity.

My grandfather, Muhammad Ibrahim, was one of the few educated people in our community during the 1960s and 1970s. He believed deeply in education and devoted himself to the development of those around him. One of his most significant contributions was helping to introduce co-education. At a time when there was no private school for boys anywhere in the area, his efforts opened doors to educational opportunities that otherwise would not have been available to many children, including my brother and me.

I was too young to understand the significance of his choices then, but as I have grown older, I have come to appreciate the influence of his example.

My uncle, Muhammad Rahim, carried that commitment forward in our family. He invested in our education and supported and encouraged me throughout my journey. His belief in education gave me the confidence and freedom to pursue my own ambitions.

When I later joined the AKU-EB system, I encountered a different way of learning. We were encouraged to understand rather than simply memorise, to question, think independently and consider different perspectives. I did not realise it then, but those habits would become central to my life as a lawyer.

While many of my peers were considering medicine or engineering, I found myself drawn to law. I wanted a profession that would challenge me to think critically, question assumptions and help others navigate difficult circumstances. My teachers took that ambition seriously and encouraged me to pursue it.

That encouragement mattered.

But every achievement has a story behind it that does not appear on a CV.

While I was in the United Kingdom pursuing my Bar-at-Law and LLM, my wife, Dr Shabana Wali, cared for our one-year-old daughter while continuing her demanding work with the World Health Organization. There were two careers to sustain, a young child to raise and a family to hold together. Her sacrifices are inseparable from my own journey.

Perhaps this is what I understand more clearly now: no one arrives anywhere alone.

When I walk into a courtroom today, I carry much more than a law degree. I carry my grandfather's example, my uncle's unwavering support, the encouragement of teachers and the sacrifices of a family that invested in my education.

I also carry the stories of people who come to me when they cannot afford to be represented. Through our office, I handle pro bono cases for people who cannot afford legal representation. There is a particular satisfaction in seeing someone leave with the relief of knowing that they have been heard and that their problem matters.

For me, that is the human side of law.

Behind every case is a person. When that person is sitting behind me in a courtroom, I know I am not there simply to argue a legal issue. I am there because, for that moment, their ability to be heard has been entrusted to me.

That has changed the way I think about success. I would like to be remembered not simply as someone who won cases, but as someone who used his profession to help people, particularly those who genuinely could not afford representation.

To the students who may be reading this, I would say: do not choose your future simply because something is considered safe, popular or prestigious. Take your education seriously. Learn to think, question and listen. Most importantly, have the courage to pursue what genuinely interests you.

You may not have everything figured out at the beginning. What matters is that you remain open to learning, make the most of the opportunities you are given and remember the people who helped you along the way.

One day, when you find yourself where you once only hoped to be, ask yourself what you can do with the opportunity you have been given.

For me, the answer has been to stand for others.

Perhaps that is the greatest lesson I inherited from my grandfather: education is not only about changing your own life. It is about what you choose to do with that change.

## The Courage to Question

I come from Chitral, a place I carry with me wherever I go. My parents moved to Karachi because they wanted my siblings and me to have opportunities that were harder to access in our hometown. Growing up between these two worlds gave me an early awareness of how much a person's circumstances can shape the choices available to them.

I saw it particularly in the lives of women.

In northern communities, women carry enormous responsibilities, often with fewer opportunities to make decisions about their own lives. Education, mobility, employment, inheritance and even the freedom to speak for oneself can become difficult negotiations. I saw women around me navigate these realities, and I began asking questions that I could not easily put away.

Why should being a woman make life harder?

Why should a person's gender determine what she is allowed to inherit, study, become or say?

Those questions eventually became the foundation of my life's work.

The moment that changed my understanding of what I could do came in 2016, when I was selected for Youth Parliament Pakistan and elected as the Opposition Leader. Until then, I had thought about inequality largely through the experiences of people around me. At Youth Parliament, I began to see the machinery behind it—the way laws are made, policies are shaped and institutions can either protect people's rights or leave them vulnerable.

I realised that if I wanted to challenge injustice, I needed to understand the systems that produced it.

That realisation also made me look differently at my own life.

I was a pre-medical student because becoming a doctor was my parents' dream for me. I tried to follow that path, but I struggled with physics, chemistry and biology. I found myself drawn instead to social sciences, to questions about people, society and justice.

Choosing law meant going against an expectation that had been placed on me with love.

It was not rebellion for the sake of rebellion. It was the difficult recognition that I could not spend my life becoming someone else simply because that was the future others had imagined for me. After many conversations, I convinced my parents to let me change fields. I became the first person in my family to study law. I worked hard and graduated with a gold medal.

That experience taught me something I now consider essential to the work I want to do: sometimes, before you can challenge the structures around you, you have to find the courage to challenge the expectations placed upon you.

In Pakistan, the need to advance girls' education and women's rights is particularly urgent. More than 25 million children aged 5–16 are out of school, including 13.4 million girls (UNICEF, 2025). In Khyber Pakhtunkhwa alone, around 2.9 million girls are out of school. These are not just numbers to me. They are millions of girls whose choices may become smaller before they have even had the chance to discover what they could become.

I believe deeply that when you educate a woman, you do more than educate an individual. You expand the possibilities of a family, a community and, ultimately, a nation.

But education must be accompanied by rights.

At the Legal Aid Society, I worked with religious minority communities and on issues including discriminatory content in textbooks. That work contributed to advocacy that reached the Supreme Court of Pakistan. I have also researched testimonial inequality against women in financial matters, hoping that the evidence can contribute to legal and policy reform.

These experiences have shown me that change rarely begins with a dramatic moment. It begins when someone asks a question that others have stopped asking.

Why is this policy fair?

Why is this tradition still acceptable?

Why should a woman have to fight for something that should already be hers?

I want to become the kind of lawyer who is willing to ask those questions, and then do the difficult work of finding answers.

I know I cannot change Pakistan alone. But I have seen what happens when one person refuses to accept that something cannot be changed. I was that person when I chose law over medicine. I want to carry the same courage into my work.

I am pursuing law at Cambridge because I want to understand how law can become an instrument of social change: how policies can be challenged, institutions strengthened and rights made meaningful for the people who need them most.

And when I think of the girl I once was – the girl who struggled with science and wondered whether she was good enough – I wish I could tell her something.

You were never not enough. You were simply becoming someone you had not yet learned to recognise.

Perhaps that is what I want most for the girls who come after me: not that they all become lawyers, doctors or leaders, but that they are given enough education, freedom and courage to discover who they are – and the right to become her.

Because being a woman should never be the reason a life becomes smaller.

AKU-EB Graduate 2014

## ◆ The Questions We Teach Machines to Answer

*Learning in the Age of Intelligence*

I started learning web development in Grade VI. At that age, I was simply curious. I wanted to understand how websites worked and what happened behind the screen. Once I learned enough to build something myself, I discovered that I enjoyed creating even more than using.

That curiosity soon became a way of thinking.

In Grade IX, when I was thirteen, I began experimenting with an online platform designed to help students find and access educational resources more easily. It was one of my first attempts to use technology to respond to a problem I had observed among students. The experience taught me something important: technology is not valuable simply because we can build something with it. It becomes valuable when it makes a difference to someone else.

I kept exploring that idea. In Grade XI, I founded Likhai Magazine to give young writers a platform to share their work. By Grade XII, I had started a content writing agency and begun teaching. Later, I founded Vutors Learning Institute and Deets Technologies, bringing together my interests in education, software and artificial intelligence.

Looking back, these were not separate paths. I was gradually trying to answer the same question: How can what I know be used to create opportunities for others?

That question has become even more relevant as artificial intelligence reshapes education and work.

For generations, education has focused largely on acquiring knowledge and demonstrating it. Today, information is available almost instantly. AI can explain concepts, analyse information, generate ideas, write code and perform tasks that once required significant time and expertise.

So I find myself asking a different question: If technology can increasingly provide answers, what should education help us become capable of doing?

I don't think the answer is to learn less. I think it is to learn differently.

Students will still need strong foundations in mathematics, science, languages and other disciplines. But they will also need to question information, recognise context, think critically, solve unfamiliar problems, collaborate and make responsible decisions. They will need to use AI without becoming dependent on it, to treat it as a tool while retaining their own judgement.

My years at AKU-EB helped me develop some of these habits. Its emphasis on conceptual understanding and analytical thinking taught me to look beyond memorising an answer and understand why something worked. That way of thinking became invaluable as I moved into software development, artificial intelligence, actuarial science and entrepreneurship, fields where I often had to learn things I had never encountered before.

Teaching reinforced this lesson. Over the years, I have mentored hundreds of students. Some entered my classes without much confidence and eventually discovered interests in technology, data science or fields they had never considered. These experiences showed me that education is not simply about giving someone information. Sometimes, it is about helping them recognise what they are capable of.

That is how I think about AI, too.

We should not adopt technology simply because it is new or powerful. We should ask what problem it solves. Can it make learning more accessible? Can it help teachers understand where students need support? Can it reduce repetitive work and give people more time for creativity, judgement and human interaction?

My own experiences have also taught me that meaningful work rarely develops exactly as planned. I have faced financial limitations, experienced ventures that did not succeed and made decisions that produced results different from what I expected. I learned to treat those experiences as feedback rather than failure.

That mindset matters in technology, where change is constant. What I learn today may become outdated tomorrow. The ability to keep learning may therefore be more valuable than trying to know everything.

I began building websites because I wanted to understand how things worked. Today, I am exploring AI for much the same reason. I hope to continue developing AI solutions that simplify learning and work, while expanding Vutors Learning Institute to help young people develop practical skills for a changing world.

But ultimately, I don't want my work to be defined only by the businesses I build or the technology I use. I want it to be measured by the opportunities those efforts create for others.

To a young AKU-EB student, I would say: don't wait until you have everything figured out.

I didn't.

I started with curiosity, built things, made mistakes, taught others and kept learning. You may begin with a question that seems small. Follow it. Build something. Test it. Learn from it.

As an AKU-EB student, I have learned that education is not only about preparing for the world as it is, but about developing the curiosity and confidence to question everything along the way.

And perhaps, in an age where machines are becoming increasingly good at finding answers, one of the most important things we can learn is how to ask the right questions.

AKU-EB Graduate 2019

## ◆ The Light I Want to Leave Behind

Growing up in Karachi, a power outage was never an emergency. It was simply part of life. The lights would go out, a study session would be interrupted, plans would change, and everyone would carry on until the electricity returned. You learn to live around the darkness.

Perhaps that is why, looking back, it feels strange that electricity became one of the things I most wanted to understand. Even as a child, I questioned things others seemed happy to accept. I took apart shoeboxes, wires and scraps and tried to turn them into something new, recreating ideas from DIY tutorials and 5-Minute Crafts videos. Not a single shoebox in our house survived without becoming a “gadget” first. I didn't just want to know what something did. I wanted to know why.

My mother, an educator, taught me to look at things through numbers, patterns and logic. My father taught me persistence and gave me the freedom to try. They taught me: Look closely. Think for yourself. And don't be afraid to try.

When my brother began a science project involving circuits, I was captivated. Wires and connections could bring something to life. I wanted to understand.

That interest stayed with me until I joined an AKU-EB school. For the first time, the way I naturally thought made sense within the way I was being taught. AKU-EB's concept-based approach pushed me beyond remembering information to understanding and applying it. I realised that while others might look at an object and think about the purpose it serves, I think about how it works to serve that purpose. That difference gave my curiosity direction and led me towards electrical engineering.

Then came another power outage. Instead of waiting for the electricity to return, I took a battery, some wires and a small motor and built my own fan. It wasn't a major invention, but it changed something in me. The child who took apart shoeboxes was now using her questions to solve a problem.

I began to understand that purpose does not always arrive as one dramatic moment. Sometimes it grows quietly through questions, lessons from our parents, an education that changes how we think and problems that refuse to leave us alone. One day, we look back and realise those things have been pointing in the same direction.

In college, I struggled to balance assignments, projects, family and everything else I wanted to make time for. I learned that I did not need to have everything figured out; I needed to start, create structure and keep moving. When things feel uncertain, I focus on doing my best, being patient and continuing forward. I often return to a verse from the Quran: “So, surely with hardship comes ease.”

Volunteering as a teacher at TCF helped me understand what I want my work to mean. Watching children light up when they understood something showed me that knowledge matters most when it creates possibility for someone else. That is the kind of impact I hope to create through engineering: solving real problems in ways that improve people's lives.

Today, I am pursuing my Bachelor's in Electrical Engineering at Habib University as an HU TOPS Scholar.

Growing up in Pakistan, I have never experienced the energy crisis as an abstract issue. I have lived it. I know what it feels like when the lights go out and how a city can learn to accept something because it happens so often. But I don't want acceptance to be the end of the story. Over the next decade, I want to contribute to changing that reality through better systems, smarter solutions and reliable, sustainable energy in Pakistan.

I don't know exactly how I will do it yet. And I don't think I need to. The little girl who took apart shoeboxes didn't know where those wires would lead. She just wanted to understand.

So I think about what electrical engineering might make possible: a stronger energy system, a more sustainable Pakistan, a community that doesn't have to organise its day around electricity, a child who can sit down at night, open a book and keep studying.

A light that stays on.

If a young AKU-EB student asked what I have learned, I would tell them: You don't need permission to dream or to feel ready before you begin. Keep asking questions, keep learning, do the work in front of you, be patient with yourself, trust God and keep going.

Sometimes purpose is not something you find. Sometimes it is something you build, one question, one lesson, one difficult day and one small act of courage at a time.

I grew up learning to live with the darkness. I want to spend my life helping bring the light back.

## Mahnoor Hassan

Bachelor's in Electrical Engineering, Habib University  
AKU-EB Graduate 2026

## ◆ You Don't Have to be Ahead

For a long time, I thought success meant staying ahead.

I was one of the top students in my school. I topped my class, took part in extracurricular activities and was comfortable in the world I had built around myself. School was a place I could call my own.

Then I moved from one school to another, and everything began to feel unfamiliar. New people, new environments and new expectations made it difficult to understand where I belonged.

Somewhere along the way, I became afraid of falling behind. I worried about being late, not excelling, not understanding something, not having friends, or simply not being good enough. My mind seemed to always be preparing for something that might go wrong.

There came a point when I needed help. My parents were there for me, quietly and consistently, even when I could not fully explain what I was going through.

They stayed while I found my way back.

By tenth grade, I had graduated as head girl with the highest marks in my school and ranked among the top students across Karachi. I had found my confidence again, but I also knew I wanted to keep growing.

That led me to join the AKU-EB system.

I was nervous when I arrived. I did not know anyone, and my earlier experiences had made new beginnings difficult. But I made friends who remain part of my life today, found teachers who encouraged me, became deputy head girl and discovered interests beyond academics, including Model United Nations.

The transition from the public board to AKU-EB was academically challenging. I had to learn differently, think more deeply and take greater responsibility for my learning.

At first, I struggled. But I began to understand that not knowing something immediately did not mean I was incapable. Sometimes, I simply needed time.

I graduated with 87%, but my experience gave me much more than a result. It gave me confidence, friendships and the courage to explore who I wanted to become.

Joining the Institute of Business Administration, one of Pakistan's leading universities, was a proud moment. I chose Social Sciences, with Psychology as my major, because I wanted to understand the mind - not only because of what I had experienced, but because I wanted to help others who may be struggling in ways they cannot yet explain.

Along the way, I have met many people whose conversations triggered something inside my mind - an idea, a question, a new way of seeing things. I am grateful for them.

Today, I try to remember that every situation has its time. Some things require action; others require patience.

I am learning not to rush time. I am learning to be uncomfortable without immediately trying to escape it. And I am learning that I don't have to fill my mind with fear.

If I constantly ask myself what could go wrong, my mind will always find something. But if I allow myself to believe that things can work out, I make room for hope.

I still think about the future, but not with worry in my mind or heart. I know that mental health is an area I want to explore further and contribute to.

But I no longer believe I have to be ahead. I am content with being myself - grateful for how far I have come, hopeful about where I am going, and filled with a sense of light.

Life is not a race. There will be downfalls, but I can always choose to get back up, ask for help, and take the next step.
